

# Mimaki ChipCharger

## Universal Charger for Mimaki and Roland Chips

### The Ultimate Tool to create and verify disposable Mimaki chips

- Creates disposable 440ml and 220ml chips for all Mimaki ink types and for Roland Eco-Max ink type.
- Supports two chip formats: OEM sized and Lite-S chips.
- Lowers the cost per chip by using inexpensive blank chips.
- Reduces your inventory down to one item: blank chips.
- Verifies your chips to avoid any mistakes.

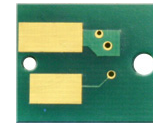

A powerful feature of this device is **Chip Verification**. It reports: ink volume in milliliters, ink type, color, expiry date, and data integrity. A verified chip will work on a printer - guaranteed.

Label printer support: ChipCharger prints a label upon a successful recharge or verification of a chip.

This device can reset an expiry date of your OEM chips or program a chip for a different color.

When new Mimaki ink types become available, the ChipCharger software will automatically download updates. Hardware stays the same.

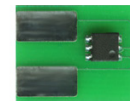

### CHIP TYPES

#### OEM-Size Chip

OEM-sized chips can be mounted directly onto a 220ml or 440ml cartridge in place of an OEM chip.

#### Lite-S Chip

Lite-S chips have been designed for use on a bulk system. They can be easily changed without having to unplug the cartridge.
