Automatic Bulk Ink Feeding System for Mimaki, Roland & Mutoh
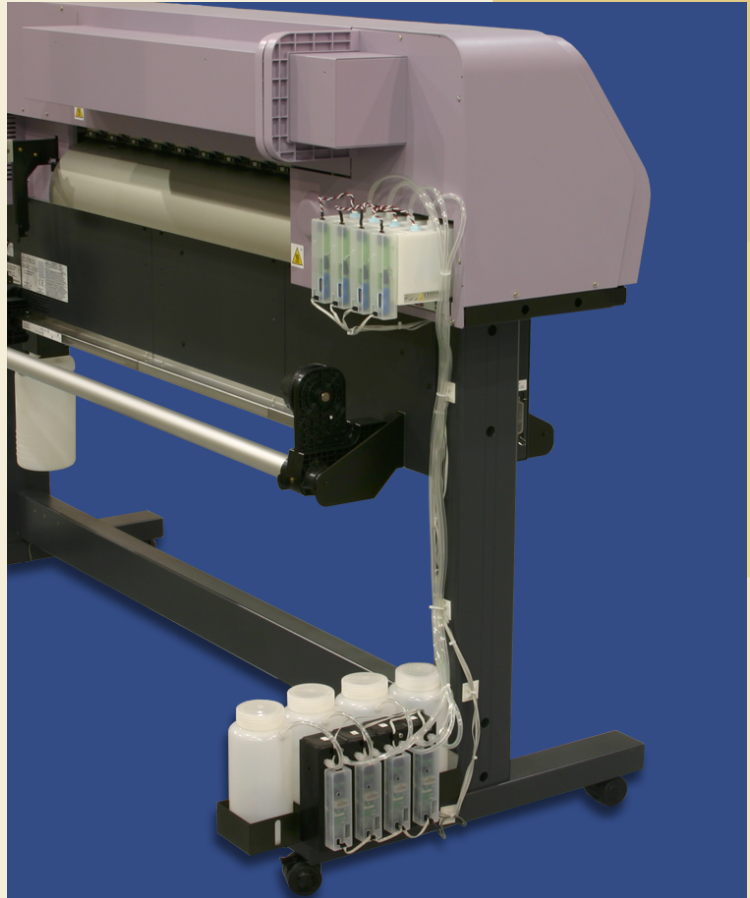

SolventCartridges.com

InkStream Pro-S

The World's Best

InkStream Pro-S is the fully automatic bulk feeding system that allows a truly initerrupted production on your Mimaki, Roland or Mutoh printer. It has electronically controlled ink pumps and level sensors. With precision level control, extremely reliable design, operator warning features, Pro-S is the most advanced bulk feeder on today's market. InkStream is the first bulk system in the world to support all known versions of JV3 firmware.

Features:

- Precision level control will ensure a perfect consistency of your prints.

- Works with any existing JV3 firmware including 6.X. It doesn't need modifying the hardware or firmware of the printer. It does not remove the ink protection from it; instead, it works exactly the same way the OEM cartridges do. There will be absolutely no trace of bulk system usage on your JV3.

- Low maintenance, fully automatic system with no need for a chip resetter.

- Allows an uninterrupted production.

- Sound and visual alarm in case of any problem, such as the low ink, sensor or pump failure.

- Built-in filters protect against head clogging.

- Ink bottles reside at the feet of your printer.

- Microprocessor-based electronic control.

- The system has a number of reliability features that will ensure you never stop production.

- Modular, easy to repair design.
