

# The World's First Professional Bulk Ink System for Seiko Colorpainter 64S & 100S

## Freedom At Last!

InkStream Pro-CP bulk system gives you a **freedom** of choosing any aftermarket ink for your Colorpainter.

## Big Savings

With OEM inks being a lot more expensive than the aftermarket ones, and the cartridges being always more expensive than the bulk inks, our system will guarantee **significant savings** and the ability to compete on the today's tough printing market.

## Easy Installation

InkStream can be installed or removed from your printer in 10 minutes.

## 100% Legal

No modification to printer's hardware or software is required. InkStream system does not disable the ink protection on a printer. Therefore it's **absolutely legal** to use.

## Keeping Your Warranties

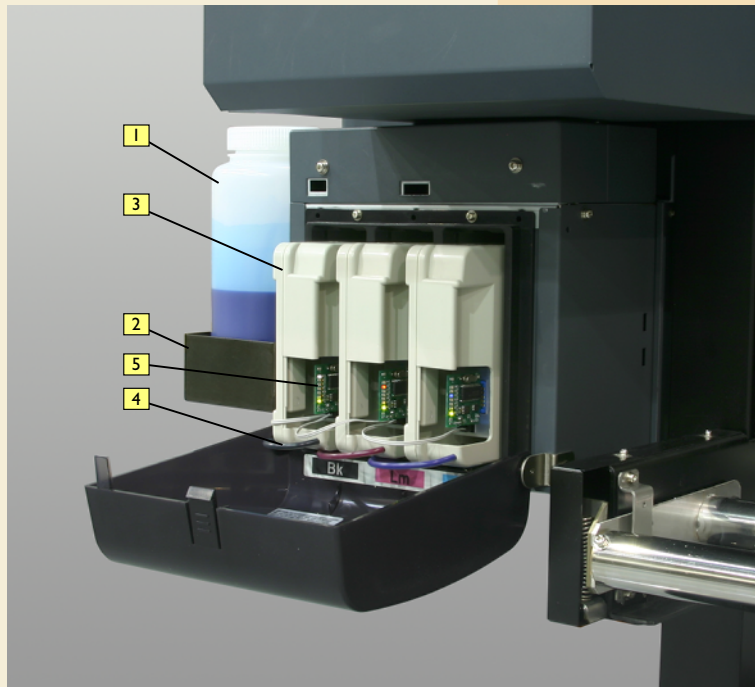

InkStream will give you a flexibility of quickly switching between the OEM cartridges and the bulk system in a matter of minutes, leaving no traces of a bulk system usage. It will be impossible for a service technician to find out that you've been running bulk inks and therefore deny a warranty service to you.

## Rechargeable Ink Chips

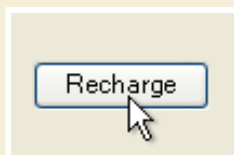

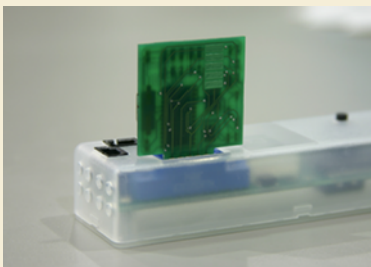

The system is based on microprocessor-controlled "ink chips" that can be re-used multiple times. They easily plug in the backs of the permanent cartridges. A small USB device called Ink Chip Recharger supplied with the system, allows quick refilling of the ink chips from any PC connected to the Internet.

## Unprecedented Warranty

InkStream Pro-CP bulk systems come with a 5-year warranty on all parts including ink filters. The warranty covers the cost of replacement parts but excludes the freight. Certain conditions apply.

- 1 - One-liter ink bottle with a submerged filter.
- 2 - Tray for ink bottles. It holds 4 bottles: 3 colors plus an optional bottle for the Flush.
- 3 - Permanent cartridge.
- 4 - Ink lines connecting the bottles with cartridges.
- 5 - Ink Chip: removable device with LED indication of the power and selected color.

Recharging the Ink Chip
